

June 2024

**Adolescent Anarchy:**

# Thirteen Years of Crypto Crimes Unveiled

# Executive summary

- This report covers data on all known crypto hacks and scams from the first one on June 19, 2011, until March 06, 2024.
- In just under thirteen years, 785 crypto theft incidents have been reported, comprised of 220 security breaches, 345 DeFi hacks, and 220 fraud scams.
- From June 2011 to March 2024 almost \$19B has been reported stolen, comprising just over \$6B in security system breaches, just under \$5B in DeFi hacks, and almost \$8B in fraud.
- Even with improved and enhanced monitoring and reporting mechanisms, illegal activity on the blockchain has continued to grow in 2023 and 2024.
- Crypto exchange security breaches recorded the highest number of incidents annually until 2021, when six breaches were dwarfed by 73 DeFi hacks. In 2022, 13 security breaches were also overtaken by 54 crypto fraud scams.
- Although 2023 saw the number of security breaches increase again to 68 worth over \$1B, their number was still eclipsed by DeFi hacks, with 112 incidents worth \$835M, and crypto frauds, at 106 incidents worth almost \$447M.
- While 2023 saw the highest number of crypto thefts ever reported annually (286 incidents worth over \$2.3B), 2022 remains the deadliest year by value, at 199 incidents worth almost \$4.2B.
- The largest single crypto theft case overall remains the 2019 Plus Token fraud, when \$2.9B worth of Bitcoin (BTC) and Ethereum (ETH) were stolen.
- In the 2023/24 period, the largest single crypto heist overall was the PlayDapp security breach in South Korea on February 10, 2024, worth \$290M of ETH.
- Over the same period, the largest single DeFi hack was the Euler Finance incident, starting in the UK on March 13, 2023, worth \$197M of ETH.
- During that time, the top ten DeFi hacks, led by Euler, accounted for almost \$579M.

**Even with improved and enhanced monitoring and reporting mechanisms, illegal activity on the blockchain has continued to grow in 2023 and 2024.**

# Executive summary

- The largest single fraudulent crypto scheme in 2023/24 was the JPEX investment scam in Hong Kong on September 13, 2023, in which \$194.3M of several currencies were stolen.
- During 2023/24, rug pulls continued their surge in popularity among fraudsters as \$143.3M were stolen in 120 reported incidents.
- The single biggest rug pull in 2023/24 was the BitForex fraud in Hong Kong on February 23, 2024, worth \$56.5M of ETH and TRX.
- In the 2023/24 period, the USA was the country most frequently targeted by crypto thieves, reporting 20 incidents worth \$287M.
- Over that period, ETH was the cryptocurrency targeted on its own the most often, with 131 incidents worth almost \$1.3B, followed by Binance Smart Chain (BSC), hit 100 times for over \$186M.
- From January 01 until March 06, 2024 had recorded 56 incidents worth almost \$579M, composed of 20 security breaches (\$477M), 14 DeFi breaches (\$37.4M) and 22 frauds (\$65M).

## Crypto hacks & scams 2023/24 overview

Since Crystal Intelligence released its 2022/2023 [Crypto & DeFi Hacks & Scams Report](#), our research team detected 324 reports of crypto theft worth nearly \$2.8B from February 24, 2023, to March 06, 2024.

By comparison, 183 incidents worth almost \$3.7B were recorded from February 23, 2022, until February 18, 2023.

This brings the all-in total of reported crypto hacks and scams from the first in 2011 to 785 incidents worth just under \$19B.

We have analyzed the numbers for cryptocurrency compliance officers, investigators and supervisors seeking insights into the current crypto crime landscape in both the long and short term and what this means for the future of the DeFi industry.

# Crypto security breaches, hacks and scams per country 2011 - March 2024

While 590 of the 785 crypto thefts, worth almost \$9B, did not take place in specific countries or regions, 195 thefts worth \$9.7B targeted 55 countries around the world.

## The top five regions attacked 2011-2024

USA	34	\$984M
Hong Kong	15	\$1.2B
South Korea	13	\$380M
UK	12	\$618M
Singapore	10	\$133M

The USA recorded the highest number, at 34 incidents worth almost \$984M. It was followed by Hong Kong with 15 incidents worth just under \$1.2B, South Korea with 13 incidents worth over \$380M, the UK with 12 incidents worth over \$618M, and Singapore with 10 incidents worth nearly \$134M.

The highest-valued single incident in a specific country remains the Thodex fraud in Turkey in April 2021, worth about \$2B in unknown cryptocurrencies.

# Crypto hacks and scams

## Feb 2023 to March 6, 2024

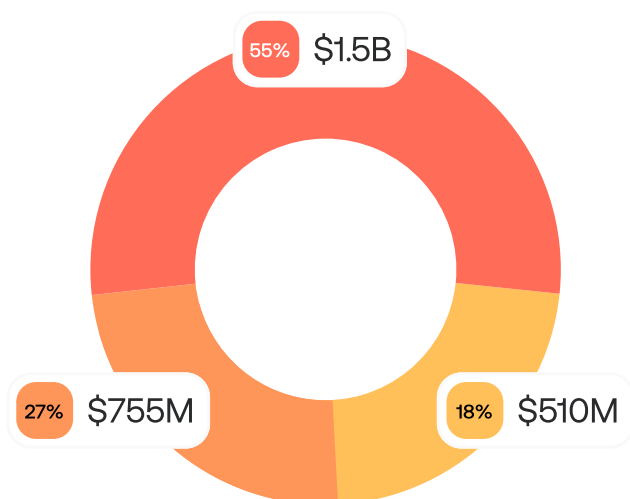

In the 2023/2024 period, 324 reported crypto thefts worth almost \$2.8B comprised:

- 85 security breaches to the value of nearly \$1.5B, which is over half the total value for the period.
- 114 DeFi breaches to the value of more than \$755M, which is 27% of the USD total.
- 125 rug pulls & investment scams to the value of over \$510M, which is 18% of the USD total.
- The USA was the country most frequently targeted by crypto thieves, reporting 20 incidents worth \$287M.
- ETH was the cryptocurrency most frequently stolen on its own and for the highest value, with 124 incidents worth \$1.26B, followed by BSC with 98 thefts worth over \$184M.
- ARBI was hit 23 times separately for \$34.5M. Thefts of two or more currencies (including the three mentioned above) in single incidents took place 34 times for nearly \$915.4M.

### Crypto amounts stolen (USD) via hacks & scams in 2023/24

# Biggest DeFi hack in 2023/24

The largest single DeFi crypto heist was the Euler DeFi breach on March 13, 2023, worth \$197M of ETH. The hack dragged down many other affiliated crypto exchanges and impacted four countries. Having originated in the UK, the Euler breach soon caused France-based Angle Protocol to lose \$17.6M. Balancer lost \$11.9M, and US-based Idle Finance lost \$10.9M, to name a few. The period also saw so-called flash loans become popular, recording 17 such incidents worth \$25M.

## DeFi hacks 2023/24: the numbers

In 2023/24, there were 114 DeFi hacks worth just over \$755M, which is 27% of the total amount of crypto in USD stolen during that period. DeFi Hacks targeted ETH the most often and for the highest value at 49 incidents worth over \$326M. BSC followed with 23 incidents worth almost \$19M, then Arbitrum with 11 incidents which cost nearly \$24M. Sixteen DeFi hacks of two or more cryptocurrencies at the same time (including the three above) were worth more than \$230M.

The biggest DeFi hacks, led by the Euler breach, yielded almost \$579M to criminals from February 2023 to March 2024. After Euler, Multichain (\$126M of FTM), Atomic Wallet (\$100M of multiple cryptocurrencies), and Kyber (\$54.7M of MATIC & AVAX) were the worst afflicted. The top ten DeFi hacks contributed 77% of the total USD value of DeFi breaches during 2023/24, and 21% of the overall USD value of crypto stolen during that time.

# Top DeFi hacks of all time

There were 345 DeFi hacks from 2011 to March 2024, worth almost \$5B, which is about 26% of the all-time USD total stolen. Here we list the top hacks with a value of more than \$100M.

Date	Entity	Blockchains	USD amount
29 Mar 22	 Ronin	ETH	650M
10 Aug 21	 PolyNetwork	ETH BSC MATIC	614M
02 Feb 22	 Wormhole	SOL	326M
13 Mar 23	 Euler Finance	ETH	197M
17 Apr 22	 Beanstalk	ETH	182M
17 Apr 22	 Wintermute	ETH	160M
01 Nov 21	 BXH	BSC	140M
13 Dec 21	 Vulcan Forged	ETH	140M
27 Oct 21	 CreamFinance	ETH	130M
03 Jun 23	 Multichain	FTM	126M
02 Dec 21	 Badger DAO	BSC ETH	120M
06 May 22	 Elrond	EGLD	113M
03 Jun 23	 Atomic Wallet	BSC DOGE MATIC ETH BTC LTC	100M

## Fraudulent crypto schemes in 2023/24

There were 125 crypto fraud scams worth \$510M during the period covered, which is 18% of the total USD value of stolen crypto in that time. The incidents were made up of 120 rug pulls worth \$143M and five investment scams worth nearly \$367M.

The largest single fraudulent crypto scheme in 2023/24 was the JPEX investment scam in Hong Kong on September 13, 2023, in which \$194.3M of several currencies were stolen.

BSC was the currency most frequently targeted on its own and for the highest individual value, having been hit 66 times for \$146M. ETH was hit 37 times for almost \$14M. There were five thefts of two or more currencies in single incidents, which were worth over \$303M.

In 2023/24, BSC was the currency most frequently targeted on its own and for the highest individual value, having been hit

**66 times  
for \$146M**

## Rug pulls and investment scams

A rug pull is a term used in crypto trading to describe a situation where a criminal posing as a DeFi entrepreneur or developer exaggerates the potential profits of a virtual asset investment to attract investors. However, once the investors have funded the scheme, the entrepreneur abruptly withdraws his support, disappears and takes the investors' virtual assets with them. This sudden action effectively "pulls the rug out from under" the unsuspecting investors.

Find out more about rug pulls [here](#).

An investment scam in crypto trading borrows from TradFi-based fraud principles. Investors are duped by direct approaches from DeFi-based criminals making false promises and often contriving an atmosphere of urgency, which makes victims fear missing out on spectacular profits if they do not immediately commit funds.

These scams often offer incremental inducement payments (small, enticing payouts to retain victims' trust) that build investor confidence. However, after the ruse is exposed, investors find it difficult, if not impossible, to extract their funds while the fraudsters pocket those investors' virtual assets.

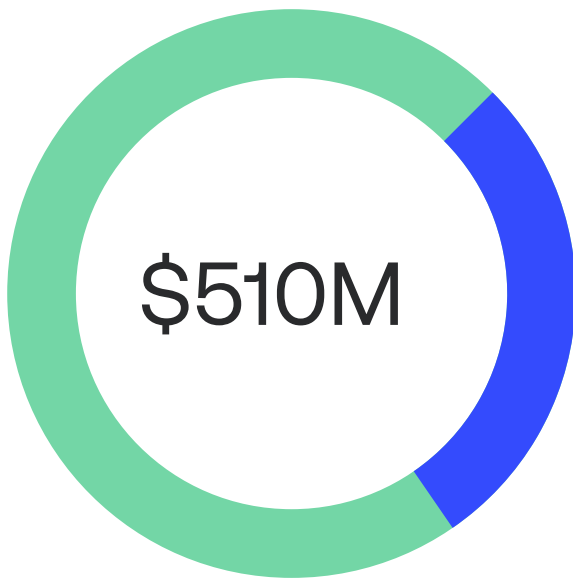

# Why are rug pulls significant during bull runs on crypto?

Firstly, virtual asset trading borrows the ‘bulls and bears’ concept from TradFi stock trading. A ‘bull run’ is when investor confidence is gathering momentum, increasing the perceived value of and demand for certain cryptocurrencies that appear to be on the rise.

On the other hand, a bear run is when those same stocks reduce in value over time, much like the peaks and troughs of waves.

Critically for fraudsters running crypto rug pulls and investment scams, the bull run is when they dupe naïve investors into purchasing crypto by pointing to rising crypto values and hiding the inevitable troughs to follow. They then cash out, leaving investors floundering, confused, and often broke.

## Crypto investment scams & fraud/rug pulls total value by USD 2023/2024

© Crystal Intelligence 2024

**\$367M**

Investment Scams

Total USD	Entity	No. of cases
\$194M	JPEX	1
\$120M	Solar Techno Alliance	1
\$32M	Fintoch	1
\$20M	Hounax	1
\$1M	Harvest Keeper	1

**\$143M**

Fraud/Rug Pulls

Total USD	Blockchain	No. of cases
\$70M	ETH	38
\$33M	BASE	5
\$26M	BSC	65
\$9M	ARBI	7
\$3M	ZkSync	3
\$1M	BLAST	1
\$1M	SOL	1

## Rug pulls in 2023/24

During the period covered, there were 120 rug pulls reported worth \$143.3M, which is 5% of the total amount of crypto stolen.

The largest single crypto rug pull was the BitForex fraud in Hong Kong on February 23, 2024, worth \$56.5M in ETH and TRX.

**BSC was the currency targeted most often, followed by ETH**

**BTC** 65 times for \$26M

**ETH** 37 times for \$13,8m

## Investment scams in 2023/24

During the period covered, there were five investment scams worth almost \$367M, which was 13% of the total stolen.

The largest single investment scam in 2023/24 was the JPEX debacle in Hong Kong on September 13, 2023, in which \$194M of several currencies were stolen.

Three incidents of two or more cryptocurrencies being stolen in the same heist cost \$245.8M - BSC was hit once for \$120M, and EOA also once for \$933k.

## Security breaches in 2023/24

From February 27, 2023, to March 06, 2024, 85 security breaches worth over \$1.5B were recorded, which was almost 55% of the total amount of crypto stolen.

When stolen alone, ETH was the most often targeted (38 times) and had the highest total value (almost \$920M), followed by BSC (nine times for nearly \$19,2M).

The largest single heist in South Korea was PlayDapp on February 10, 2024, which cost \$290M in ETH. While 45 incidents worth over \$102M had no defined location, the USA was the country targeted most often: eight times for \$263M, followed by South Korea with five breaches worth \$512M.

By comparison, during the period from January 15, 2022, until January 28, 2023, 12 security breaches worth \$1,25B were recorded, with the US-based FTX debacle alone accounting for \$600M worth of ETH, BSC, and ERC20 being stolen.

## Pig butchering 2020 – 2024

Pig butchering in crypto is the practice of creating and nurturing an apparent business relationship with investors, which is, in fact, a parasitic one that ends with the scammers defrauding them, like how farmers will fatten up pigs before slaughtering them to consume.

According to a study by John M. Griffin and Kevin Mei of the University of Texas at Austin, pig butchering resulted in the illicit movement of over \$75B through crypto exchanges from January 2020 to February 2024.

### What is the difference between pig butchering and romance scams?

Pig butchering alludes to fattening a pig up to an optimal size before killing it to eat it. While romance scams follow the same principles, their peculiarity is that they target vulnerable individuals longing for love, that most intangible and irresistible human emotion. A romance scam involves stringing a lovestruck victim along, usually taking money from them during the virtual relationship, until the ruse expires, or the money runs out.

Find out more about romance scams [here](#).

## Why are pig butchering scams significant during the bull run?

As with rug pulls and investment scams, bull runs on crypto help pig butchering scammers disguise their intentions from potential victims in the following ways:

The relatively sudden increase in interest in crypto trading often brings new, less experienced investors into the market. Their inability to accurately differentiate between genuine investment opportunities and fraudulent schemes makes them easy targets for scammers.

Bull runs see funds move quickly and in high volumes, which scammers exploit: firstly, to throw off law enforcement agencies' efforts to trace or follow crypto transfers, and secondly, to persuade inexperienced crypto participants to invest more into their schemes.

The higher transaction volumes and the speed at which they occur during bull runs make it harder for investors and authorities to distinguish between legitimate and fraudulent transactions.

The rise in crypto asset prices during bull runs is attractive to criminals in the same way it is to legitimate investors - it presents the perceived opportunity to make quick profits. The spikes of 'investor adrenaline', or so-called 'fear of missing out (FOMO)', can make victims prone to irrational decision-making about parting with their funds, a human trait that scammers can exploit.

## Pig butchering 2020-2024

Criminal organizations moved approximately \$75.3B worth of funds associated with pig butchering scams onto cryptocurrency exchanges from January 2020 to February 2024. \$15.2B of this total was accounted for by exchanges popular with US investors.

The Griffin / Mei report covered 4,728 cryptocurrency addresses associated with pig butchering scams. ETH addresses were the most reported, at 3,256 worth \$5.8B, followed by BTC (770 addresses worth \$373M), and Tron (702 addresses worth \$389M).

One data set in the Griffin / Mei report found a total pig butchering transaction volume of \$1,172T, with 84% of the transactions involving the stablecoin Tether (the popular choice of scammers to exit the DeFi system due to its relative stability and opacity). This indicates the sheer scale of the funds involved in these scams.

More than 104,000 minor inducement payments to victims during the ‘fattening up’ period of the pig butchering scams were reported by Griffin / Mei, mostly via the Binance, Huobi, and OKX exchanges, again predominantly using Tether. The numbers highlight how well-organized many pig butchering scammers and syndicates are.

When Chinese financial regulatory authorities banned crypto in late 2021, the number of Chinese romance scam victims dropped significantly, while that of US victims inversely increased.: According to Griffin / Mei, there were 70,000 reported romance scams in the US worth \$1.3B during 2022 alone (a figure they believe is likely higher due to under-reporting). This indicates that pig butchering scammers and syndicates adapt to global regulatory shifts.

## Address poisoning: what is it?

Address poisoning in crypto-based financial crime occurs when scammers create crypto wallet addresses almost identical to the intended victims’ actual addresses. Since blockchain addresses comprise strings of characters that are long and hard to memorize, legitimate business entities shorten them with a ‘first few and last few’ characters approach to be more user-friendly.

Scammers are known to monitor accounts on the blockchain. They create accounts that look similar to the intended victims’ accounts. Then, they send small amounts of cryptocurrency to the fake wallets they created. When the victims make a significant transaction, the scammers rely on human errors such as carelessness, distraction, or lack of vigilance. As a result, the victims inadvertently send funds to the fake address, mistaking it for their own.

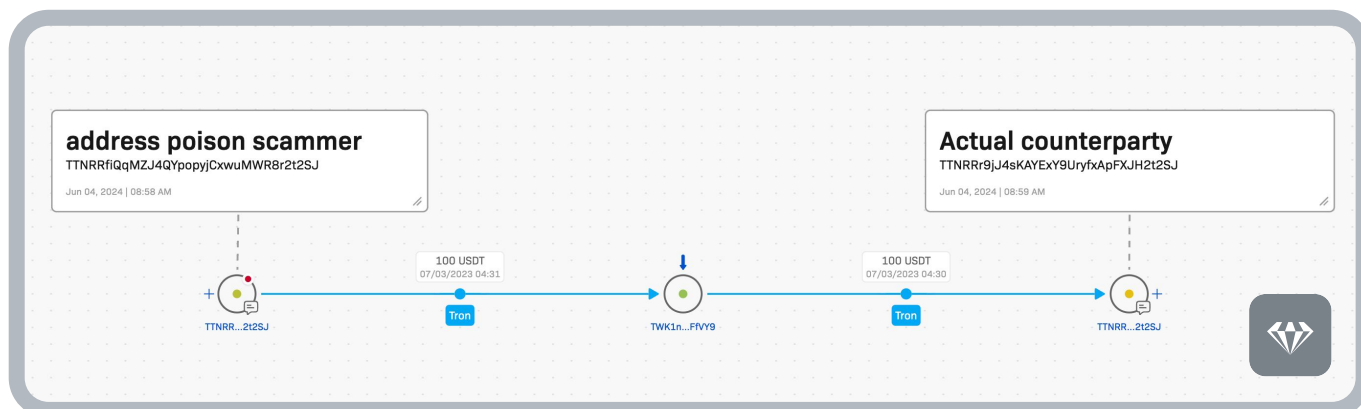

The relative anonymity and the intricacies of transactions on the blockchain make it difficult to recover funds once they’ve been inadvertently sent to the wrong addresses.

However, legitimate crypto users can mitigate the risk of being duped in the following ways:

- Carefully verify all crypto addresses with whom they transact, paying meticulous attention to every character of each address.
- Try testing transactions of small amounts to confirm that the recipient address is correct. While this could mean paying transaction fees, twice or more, it buys peace of mind and improved security.
- Use an address book to store your most often-used crypto addresses.
- Use cold wallets for crypto addresses, as they are offline and, therefore, virtually unbreachable by scammers.

## Address poisoning examples:

- In March 2023, a scammer attacked Arbitrum users using a combination of ‘phishing’ and address poisoning to make transactions seem legitimate. The attacker amassed 930,000 ARB tokens worth \$1.3M, duping about 600 crypto wallet holders. Find out more [here](#).
- In late-November 2023, a scammer targeted Safe Wallet users with an address poisoning attack, stealing \$2M in one week and duping 21 victims. Find out more [here](#).
- Below, see a graph from our analytics platform, Crystal Expert, that illustrates an example of address poisoning where the scammers address closely matches the intended victim’s account.

## Fraudulent cryptocurrency offers

- **Crypto doubler scams:**

This is when scammers offer unsuspecting or naive investors the chance to double their cryptocurrencies' value by paying a relatively small fee. The scammer then pockets the money and disappears.

In early 2023, a 19-year-old scammer in India ran a scam offering investors the opportunity to double their money in one day. One victim, who reported his losses to police—leading to the scammer's arrest—complained that he had been expected to pay Rs 10,000 commission and Rs 6,000 for a month but was then told that the profit was 'locked' until another Rs12,000 was paid. In total, the victim lost Rs 45,000.

Find out more [here](#).

- **High-yield investment programs (HYIPs) in crypto:**

This is when scammers on crypto-based HYIP platforms offer very high crypto investment returns with very low risks attached. The scheme usually involves getting victims to sign up on websites, falsely reporting profits in their crypto wallets, and then finding themselves unable to withdraw their funds. By then, they realize too late that they've been fleeced.

The US Department of Justice brought such a scheme to book in April 2019, when they indicted two Nigerian nationals. The scheme involved websites offering victims 20 to 50% returns on BTC investments, which netted the accused 10.88 bitcoins worth \$59,000 from three victims over six months.

Find out more [here](#).

- **Fake give-away offers:**

This is when scammers make highly appealing promotional offers of 'free' crypto on fake websites and social media channels and can fraudulently use the fake backing of crypto industry thought leaders. Retrieving the free crypto will entail victims paying a small fee, which the scammers then pocket and disappear, and the victims realize too late that there is no free crypto forthcoming.

An example is the Elon Musk scams (which also utilize doubler scam techniques), in which the tech giant is featured on YouTube and X apparently promoting crypto giveaways.

However, the video footage is stolen, legitimate-looking sources are fake, and no free crypto is coming into their wallets.

Find out more [here](#).

## Conclusions and predictions

Possibly the most striking aspect of crypto crime developments, now in their teens, which Crystal has observed is the rate at which new criminal typologies emerge, fresh law enforcement technologies and techniques are implemented to combat them, and the process recycles itself.

While new crypto crime challenges cannot always be predicted, they can be expected, and Crystal Intelligence's scalable and adaptable product and service offering is available and capable of fine-tuning to your organization's requirements, regardless of whether you are engaged in regulation, compliance, investigation, or analysis.

## Data gathering and analysis explanation

The data in this report has been collected by the Crystal Intelligence analytics team, using the tools provided by Crystal Expert, our blockchain analytics platform.

As the use of cryptocurrency becomes more widespread, it is becoming increasingly important for anyone involved in crypto compliance and regulation to have the necessary tools to analyze and visualize interactions among the largest Virtual Asset Service Providers. To provide advanced analytics, Crystal remains vigilant in monitoring any illicit cryptocurrency activities.

Furthermore, the compiled data is sourced from a range of reputable channels, encompassing user-reported incidents of scams and hacks, cybersecurity reports, independent blockchain investigators reports, and studies conducted by academic institutions specializing in cybersecurity. This multifaceted approach ensures a thorough and independent analysis of the subject matter.

# Appendix #2

## Key Definitions

---

### **DeFi Hack:**

Taking possession of digital assets of users on decentralized protocols by searching for vulnerabilities in the code.

---

### **Security Breach:**

A set of actions aimed at finding vulnerabilities in digital systems of centralized cryptocurrency entities in order to capture cryptocurrency assets.

---

### **Fraudulent Scheme:**

Fraud, the result of which is the acquisition of digital assets of users by providing deliberately false information.

---

## Final note

This report was compiled by the Crystal Intelligence analytics team using tools available within our analytics platform, Crystal Expert.

As cryptocurrency adoption continues to grow, it will be imperative that anyone involved in crypto compliance and regulation has the tools to hand to visualize and analyze interactions between the largest publicly operating Virtual Asset Service Providers.

The Crystal analytics team continues to monitor illegal moves of cryptocurrencies in order to provide advanced analytics and the team will update this report quarterly, with any important changes reflected respectively.

If you are interested in using the Crystal Intelligence analytics platform, Crystal Expert, in your organization, please email us at [contact@crystalintelligence.com](mailto:contact@crystalintelligence.com).

Crystal Expert is the all-in-one blockchain analytics tool for crypto AML compliance. Available as a free demo version, SaaS, API, and for on-premise installation..
